Subject: Letter of Recommendation supporting application of Mr. Attila Nemet

To Whom It May Concern,

I had the pleasure of teaching **Attila Nemet** in the **Satellite Communications** course as part of the **Interdisciplinary Space Master's program** at the **University of Luxembourg**. Throughout the course, I not only lectured on theoretical concepts but also supervised the laboratory exercises, where I had the opportunity to closely observe Attila's approach to problem-solving and his interactions with his peers.

During laboratory sessions, Attila consistently distinguished himself. He was among the first to complete the exercises, not merely because of speed but due to his **efficiency, analytical thinking, and structured approach**. He has an innate ability to **break down complex problems into manageable, solvable steps**, allowing him to navigate technical challenges with ease. Furthermore, his **collaborative nature and willingness to assist his classmates** underscored his leadership potential and team spirit.

One of Attila's defining traits is his **ability to think outside the box**. His unconventional approach to problem-solving is both a strength and, at times, a challenge. He is not someone who follows a predefined path blindly; rather, he continuously questions, innovates, and explores alternative perspectives.

Attila may not yet have a clear roadmap for what he wants to become in the future—and that's precisely what makes him stand out. He is a **driven, inquisitive, and resourceful individual** with the potential to make meaningful contributions to any field he chooses to pursue.

I strongly recommend **Attila Nemet** for any academic, research, or professional opportunity that values critical thinking, technical proficiency, and a proactive mindset. He is a **versatile and promising individual**, and I have no doubt that he will continue to grow and thrive in any intellectually stimulating environment.

If you require any further information, please feel free to contact me at jorge.querol@uni.lu.

Sincerely,

Dr. Jorge Querol

Research Scientist / Head of the 6GSPACE Lab
