PhD Candidate in Autonomous Driving Systems

Dear Professor,

I am writing to express my strong interest in the PhD position in Autonomous Driving Systems at SnT, as part of the ATLAS IPBG Program. With my extensive background in ICT, recent completion of an Interdisciplinary Space Master's degree, and passion for emerging technologies, I believe I am well-suited to contribute to this innovative research project.

After finishing my university studies in Romania (Electronics and Telecommunication, 5 years) I moved to Hungary where I joined Ericsson and worked in telecommunication for more than two decades. On my journey I've experienced the development of telecommunication from fixed networks through 2G, 3G and 4G up to the 5G mobile networks. There was never a dull moment – I helped implement the latest technologies in more than 20 countries, acquiring “on the fly” the new technological advancements. In 2017 I moved to Luxembourg because of familial reasons, and I continued to work remotely for Ericsson in SW development with regular travelling back to Hungary.

I've discovered the beauty of programming, the latest advancements in ML and AI and I've absolved countless online courses on these domains with the intent to divert my career in this direction within Ericsson. When the ML/AI path just opened within the company, the pandemic crossed my plans. Travelling was not possible anymore, everybody started working remotely, but Ericsson enforced a new policy: remote working from abroad was prohibited.

To further enhance my expertise in AI/ML, I enrolled in the ISM (Interdisciplinary Space Master) program at the University of Luxembourg. I've got my diploma this September, and I really enjoyed the possibility to get new expertise and enlarge my world view. On my SSP (Space Scientific Project) I worked on generating training images for lens flare removal using Blender's Python interface and my master thesis subject was testing of space software using LLMs.

I believe my diverse experiences in telecommunications, coupled with my recent studies in space technologies and AI/ML, make me a strong candidate for this PhD position.

Sincerely,

Attila Nemet
