PhD Candidate in 5G/6G Communications for UAV Cross-border Service Continuity

Dear Professor,

I am writing to express my strong interest in the PhD position focused on developing solutions for 5G-UAVs in the context of service continuity in roaming scenarios between Luxembourg and Belgium. With my extensive background in telecommunications, recent completion of an Interdisciplinary Space Master's degree, and passion for emerging technologies, I believe I am well-suited to contribute to this innovative research project.

My journey in the field of telecommunications spans over two decades, primarily with Ericsson, where I've experienced the evolution from fixed networks through 2G, 3G, and 4G up to 5G mobile networks. This experience has provided me with a strong foundation in telecommunications and networks, particularly in 3GPP standards up to 5G at the system level. My work implementing the latest technologies in more than 20 countries has honed my problem-solving skills and ability to adapt quickly to technological advancements.

My recent completion of the Interdisciplinary Space Master's program at the University of Luxembourg has further expanded my expertise. During this program, I worked on generating training images for lens flare removal using Blender's Python interface and my master's thesis focused on software testing using LLMs (Large Language Models).

I would be honored to bring my expertise to your team to advance the state of 5G-enabled UAV technologies and am excited about the opportunity to contribute to innovations that push the boundaries of telecommunications and autonomous systems.

I look forward to discussing how my background and skills can contribute to the success of this research project.

Sincerely,

Attila Nemet
