Interdisciplinary Space Master
University of Luxembourg

Dear Professor,

It is with great pleasure that I am submitting my application for the Space Master branch at University of Luxembourg.

After finishing my university studies in Romania (Electronics and Telecommunication, 5 years) I moved to Hungary where I joined Ericsson and worked in telecommunication for more than two decades. On my journey I've experienced the development of telecommunication from fixed networks through 2G, 3G and 4G up to the 5G mobile networks. There was never a dull moment – I helped implementing the latest technologies in more than 20 countries, acquiring “on the fly” the latest technological advancements. In the last 5 years I moved to Luxembourg because of familial reasons, and I continued to work remotely for Ericsson in SW development with occasional travelling back to Hungary.

I've discovered the beauty of programming, the latest advancements in ML and AI and I've absolved countless of online courses on these domains with the intent to divert my career in this direction within Ericsson. When the ML/AI path just opened within Ericsson, the pandemic crossed my plans. Everybody started working remotely so at first glance it looked that the playfield is levelling up for me, but the company started to enforce a new policy: remote working from abroad has been prohibited.

Now I'm back at square one and this could be a great opportunity to ameliorate my AI/ML knowledges and get new ones in the infinity and beyond 😊. Since the space is pretty harsh with humans, robotization and automation could fill the gap, and considering my telecommunication background and the fact that in the high school I won physics competition prizes on national level, I might be well suited to solve the unexpected.

Sincerely,

Attila Nemet
