Doctoral Researcher in AI and ML for Biomedical Imaging

Dear Hiring Committee,

I am writing to express my strong interest in the Doctoral Researcher position in AI and Machine Learning for Biomedical Imaging at the Luxembourg Centre for Systems Biomedicine (LCSB). As a recent graduate of the University of Luxembourg's Interdisciplinary Space Master and a current student at 42 School, I am eager to apply my background in computer vision and deep learning to the vital field of neurodegenerative disease research.

My academic journey at the University of Luxembourg has provided me with a solid foundation in the specific skills required for this role. notably, I achieved a perfect score (20/20) in the Computer Vision subject. This coursework culminated in a practical image recognition and categorization project executed on a large dataset utilizing the University's High-Performance Computing (HPC) environment. Consequently, I am already familiar with the specific computational infrastructure used at the University and have hands-on experience optimizing algorithms for GPU-enabled environments.

Furthermore, my technical experience extends to developing tools for modifying training datasets. As detailed in my CV, I developed the "Lens Flare Wizard," a Python and Blender-based toolkit designed to augment training data for computer vision models. This experience in generating synthetic data to improve model robustness directly aligns with your goal of building trustworthy AI models for biomedical applications.

Combined with over two decades of professional experience in ICT at Ericsson - where I mastered Python scripting and worked in multicultural teams across 20+ countries - I offer a unique blend of academic curiosity and professional discipline. I am deeply motivated to transition these skills from the domain of space technologies to biomedical imaging, where I believe AI can have a profound impact on patient outcomes.

Thank you for considering my application. I look forward to the possibility of discussing how my experience with the Uni Lu HPC and my passion for computer vision can contribute to the LCSB team.

Sincerely,

Attila Némét
